

Aeris 25

Recotherm
INNOVATIVE VENTILATION TECHNOLOGY

Saving energy through efficient technology

Our Engineering Pedigree

Designing the best product for the best price

The Aeris 25 series is a fresh air system that is small in size but big in performance. At just 900mm high and 1100 wide this unit is ideal for the smaller pool area up to 25sq meters surface area, or a spa, and will keep the pool hall atmosphere balanced in terms of temperature and humidity.

There are two options; the 25 for the most cost effective solution and the 25+ for those wanting the most efficient system with options, that include, remote sensing maintenance and scented air injection.

Fresh air intake for dehumidification rather than refrigerant gives fresher feel to the environment

Fully functioning BEMS (building energy management systems) means that it is always operating at its peak performance

Scrollless fans that give greater efficiency controlled by Real speed controllers

High efficiency filters to remove particulates

Fully modulating heating valves and dampers to ensure that the precise amount of energy is used to maintain the pool hall conditions
